Under the provisions of state law, this report is a public document. A copy of this report has been submitted to the Governor, to the Attorney General, and to other public officials as required by state law. A copy of this report is available for public inspection at the Baton Rouge office of the Louisiana Legislative Auditor.

This document is produced by the Louisiana Legislative Auditor, State of Louisiana, Post Office Box 94397, Baton Rouge, Louisiana 70804-9397 in accordance with Louisiana Revised Statute 24:513. Six copies of this public document were produced at an approximate cost of \$57.90. This material was produced in accordance with the standards for state agencies established pursuant to R.S. 43:31. This report is available on the Legislative Auditor's website at www.lla.la.gov. When contacting the office, you may refer to Agency ID No. 9726 or Report ID No. 40130057 for additional information.

In compliance with the Americans With Disabilities Act, if you need special assistance relative to this document, or any documents of the Legislative Auditor, please contact Elizabeth Coxe, Chief Administrative Officer, at 225-339-3800.

November 19, 2014

The Honorable John A. Alario, Jr.,
President of the Senate
The Honorable Charles E. "Chuck" Kleckley,
Speaker of the House of Representatives

Dear Senator Alario and Representative Kleckley:

This performance audit report provides the results of our audit of the Governor's Office of Elderly Affairs (GOEA). We evaluated GOEA's management and oversight of the aging network in Louisiana. Specifically, we identified the challenges Louisiana faces in providing these services and provided recommendations on how GOEA could improve its management and oversight to ensure that elderly citizens receive quality services. I hope this report will benefit you in your legislative decision-making process.

We would like to express our appreciation to the management and staff of the GOEA, the state's Area Agencies on Aging, and the parish Councils on Aging for their assistance during this audit.

Sincerely,

Daryl G. Purpera, CPA, CFE

Legislative Auditor

Management and Oversight of the Aging Network in Louisiana Governor's Office of Elderly Affairs

November 2014 Audit Control # 40130057

Introduction

The Governor's Office of Elderly Affairs (GOEA) has undergone numerous changes over the last few years. In 2011, the Governor recommended that the office be relocated administratively under the Department of Health and Hospitals (DHH). Although GOEA retained its place in the Governor's Office, its staff and funding were reduced. In 2013, the Legislature passed Act 384 to create the Department of Elderly Affairs as a separate executive branch agency, but did not provide for administrative placement. Voters in the November 2014 election rejected a

Louisiana's aging network is a multi-tiered network that includes:

- GOEA as the state unit on aging,
- 36 federally recognized Area Agencies on Aging,
- 64 parish Councils on Aging, and
- 132 senior centers.

constitutional amendment that would have allowed the Department of Elderly Affairs to become the 21st executive branch agency.

The purpose of this audit was to review GOEA's management and oversight of the aging network in Louisiana which includes federally authorized Area Agencies on Aging (AAAs) and parish Councils on Aging (COAs). The report identifies the challenges Louisiana faces in providing services to the elderly and provides recommendations on how GOEA can improve its management and oversight of the aging network. As the federally designated state unit on aging, GOEA is responsible for oversight and management of federal Older Americans Act (OAA) programs, such as home-delivered meals, personal care services, and transportation.

Our audit objectives were as follows:

- 1. What challenges does Louisiana face in providing services to the elderly?
- 2. How could GOEA improve its management and oversight of the aging network in Louisiana?

Overall, we found that Louisiana faces a number of challenges including the structure of the network, gaps in data management practices, the lack of funding especially in rural areas with poor tax bases, and the increase in the population needing services. In addition, having stronger and more consistent oversight and strategically using data to evaluate and manage would help GOEA ensure that effective and relevant services are delivered to the increasing number of elderly in Louisiana, including those with the greatest social and economic need. Improving oversight would also help ensure that COAs and AAAs are held accountable for their roles in service delivery and oversight.

Appendix A includes GOEA's response to our recommendations and Appendix B contains our scope and methodology. Appendices C through L provide the following information:

- Appendix C: Background, Funding, and Services
- Appendix D: COA Sources of Revenue for Fiscal Year 2013
- Appendix E: Older Americans Act Services Provided in Louisiana for Fiscal Year 2013
- Appendix F: Map of AAAs, COAs, and Senior Centers
- Appendix G: Parish COA Percent of Clients Assessed by Need
- Appendix H: Parish COA Administrative Costs
- Appendix I: Parish COA Unit and Client Costs per Service
- Appendix J: Parish COA High Nutrition Risk to Nutrition Services
- Appendix K: Multi-Parish AAA Profiles
- Appendix L: Parish COA Profiles

Objective 1: What challenges does Louisiana face in providing services to the elderly?

The entities in Louisiana's aging network, GOEA, AAAs and COAs, face numerous challenges in providing quality services to the elderly population in Louisiana. To obtain information on challenges, we conducted a survey of the 64 parish COAs and interviewed stakeholders, including former employees, elder advocacy groups, and other organizations with aging related missions. According to these sources, challenges that the aging network faces include the following:

- The unique structure of the aging network and the environment in which it was created resulted in a larger network of entities with unclear roles and responsibilities.
- Not all entities in Louisiana's aging network have the appropriate skill sets to effectively manage data.
- COAs face numerous challenges in providing quality services, including lack of funding, lack of transportation, and a poor tax and industry base in some communities.
- Louisiana, like other states, will have to serve a growing number of Baby Boomers with different service needs than previous generations.

These challenges are summarized in more detail below.

The unique structure of the aging network and the environment in which it was created resulted in a larger network of entities with unclear roles and responsibilities.

Louisiana's aging network has a unique structure with COAs operating as AAAs that evolved out of a tradition of strong local influence. States generally organize their aging networks so that the designated State Unit on Aging contracts with AAAs to assess needs in their areas and contract with service providers. In most states, the AAA contracts with local providers to deliver services. In Louisiana, however, COAs often function as both the local service provider and the designated AAA. Local COAs in Louisiana were formally authorized by Louisiana Revised Statute (LA R.S.) 46:1601 in 1964, existing prior to the federal Older Americans Act of 1965. According to stakeholders, state officials attempted to reorganize the system after the Older Americans Act was passed, but some entities fought the reorganization in court. The resulting court settlement allowed some COAs to act as the AAA for their parish and other COAs to operate under multi-parish AAAs. Currently, 32 AAAs serve in a dual capacity as the parish's AAA and COA, while four AAAs serve the remaining 32 parish COAs. Exhibit 1 summarizes this structure.

Dual Function AAA/COAs Capital AAA Evangeline LaSalle Pointe Coupee Rapides St. Helena St. Martin Tangipahoa Washington West Baton Rouge

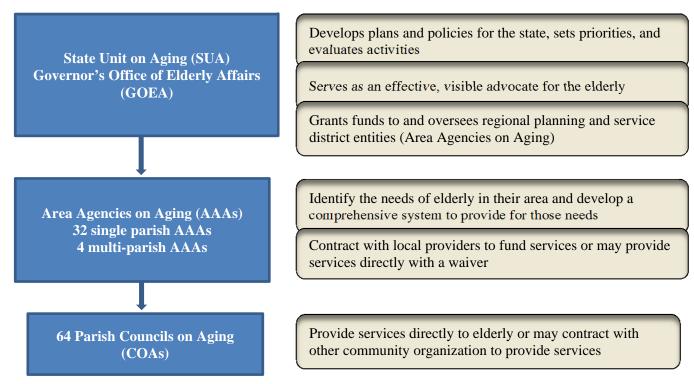

Exhibit 1 Structure of Aging Network in Louisiana

Source: Prepared by legislative auditor's staff using information from GOEA.

We obtained a variety of views on the effectiveness of Louisiana's unique structure from internal and external stakeholders. Proponents of the structure cite advantages such as having a presence in every parish of the state and allowing service planning and delivery decisions to be made as close as possible to the community served. Having a system that includes both single and multi-parish AAAs allows communities and COAs to choose which structure best fits their needs. For example, parishes with smaller, rural populations and weak tax bases may be better served by the additional administrative support available in the multi-parish AAA model; whereas, parishes with larger populations and stronger tax bases may manage more effectively with the increased autonomy that comes with the single parish AAA model. Opponents of the structure however cite disadvantages associated with Louisiana's high number of AAAs, including a fragmented system of service delivery that is difficult for GOEA to manage and oversee, potentially increased administrative costs, and inconsistencies in the implementation and effectiveness of services across the state.

Louisiana has a higher number of AAAs than other states because COAs can operate as AAAs. Each entity in the aging network has specific roles and responsibilities. Exhibit 2 describes these roles for each entity.

Exhibit 2 Roles and Responsibilities of Entities in the Aging Network

Source: Prepared by legislative auditor's staff using information from the Older Americans Act and GOEA.

According to federal law, ¹ the intended role of an AAA is to identify and oversee services to the elderly in their respective regions and does not include direct service delivery. However, the same statute allows for exceptions if the State Unit on Aging determines AAA direct service delivery meets one of the following criteria:

- AAA service delivery is necessary to ensure adequate supply of services.
- AAA service delivery is directly related to an administrative function.
- AAA can provide service more economically and with comparable quality.

These exceptions allow COAs to operate as AAAs in their parishes. As a result, Louisiana has more AAAs than most other states (36) which increases the number of AAAs for GOEA to oversee. The only states that have more AAAs than Louisiana are New York and Pennsylvania with 59 and 52, respectively. We compared the number and geographic size of region served by AAAs in Louisiana to other surrounding states. As Exhibit 3 shows, not only is the number of AAAs higher, but the geographic area and number of people eligible for services is considerably smaller per AAA in Louisiana.

Exhibit 3 AAAs in Louisiana and Other Surrounding States								
State	Number of AAAs Total Square Miles per AAA Total People People per AAA Over 60 AAA							
Alabama	13	50,645	3,896	933,919	71,840

Source: Prepared by legislative auditor's staff using data from other states and U.S. Census Bureau data.								

Louisiana's unique structure results in unclear roles and responsibilities for entities in the aging network. Although the number of entities and dual roles performed by some do not signify that the structure is inherently less efficient or effective, they do pose a unique challenge. For example, roles and responsibilities of each entity in the network are not always clear because the relationship between AAAs and service providers (COAs) is complicated by the dual role COAs are allowed to play in the network. As a result of the authorized exceptions listed above and the terms of the court settlement, Louisiana's dual AAA/COAs are allowed to function in the potentially contradictory role as both the service provider and the entity charged with oversight of service delivery. In other words, single parish AAAs both provide a service and oversee the

¹ 42 USCA § 3027

delivery of that service. This dual function creates the potential for conflict and makes it unclear as to which entity is responsible for ensuring service delivery in parishes served by single parish AAAs.

In addition, the extent of GOEA's oversight role in relation to AAAs and COAs is not clearly established. The Older Americans Act authorizes the State Unit on Aging to manage the aging network, including determining which and how many entities may serve as AAAs. However, state laws and the court settlement have historically protected COAs' local control and autonomy. GOEA's current oversight of AAAs and COAs applies primarily to those activities funded by federal money. However, parish COAs provide a variety of services beyond Older Americans Act services funded through revenue from local public sources and private donations. As shown in Exhibit 13 in Appendix C of this report, 51% of COA revenue in fiscal year 2013 statewide was from local funds. According to our survey of the 64 parish COAs, in addition to using local funds for a portion of Older Americans Act service costs, 34 (54%) COAs stated that they also used local funds to provide supplemental non-Older Americans Act services that they do not report to GOEA. Examples of supplemental services and activities provided include assistance with income taxes, hosting Senior Olympics games, providing transportation for recreational activities and field trips, a Foster Grandparent program, assistance with managing medications, and applying for other programs, such as Medicaid and food stamps (Supplemental Nutrition Assistance Program).

While GOEA cannot direct how other sources of funds are expended it should require that COAs report this information to them in a consistent manner. According to guidance from the federal Administration on Aging, it is their intent "that States incorporate into the State Plan as many of their activities related to aging as possible, regardless of funding source." Requiring that AAAs and COAs report on non-Older Americans Act services and funds would help GOEA fulfill its goal of providing direction and coordination in the delivery of services to the elderly. In addition, as a recipient of state and local public funds, COAs are accountable to state government oversight (both executive and legislative) as well as the public at large. Further, COA activities are intended to meet common goals and objectives shared by federal, state, and local stakeholders. As a result, oversight of these activities should not extend to only the federal portion. To accurately evaluate how well a COA is serving the needs of elderly citizens and hold its management accountable to the public, GOEA should have the authority to obtain information on all COA activities, regardless of funding source.

Matter for Legislative Consideration: The Legislature should consider whether changes should be made to GOEA's (or the proposed Department of Elderly Affairs') authorizing legislation to clarify its roles and responsibilities to oversee and manage the aging network, especially regarding its extent of oversight over the Councils on Aging.

Not all entities in Louisiana's aging network have the appropriate skill sets to effectively manage data.

Although we observed that some AAAs and COAs have an understanding of the importance of data management and incorporate its use in management decisions, overall, there are wide gaps in how each entity within the network manages data. GOEA contracts with a third-party vendor to host and maintain a data collection system that interfaces with the federal reporting system. COAs are required to input a variety of information into the Social Assistance Management System (SAMS) and a companion assessment database. The information includes client demographics, assessments of individual client needs, and service delivery information.

GOEA's current use of this information is primarily limited to federal compliance **reporting.** SAMS provides the infrastructure across the state to collect valuable information; however, GOEA's management practices do not take full advantage of the information collected in routine management processes, such as assessing needs on a statewide level. Specific methodologies GOEA could use to enhance its current planning, monitoring, and evaluation activities by routinely incorporating data are discussed in Objective 2 of this report. GOEA's vendor has developed standard reports that can be run by each AAA and GOEA that are included in the price and terms of the contract. Although some of the analyses could be completed using existing resources, other methodologies would require more sophisticated software and technical knowledge to access and reorganize raw data sets. The vendor's standard reports can be modified as well as custom built to meet the needs of each AAA and GOEA, although modifications and custom queries require additional costs under the terms of their current contract. As a result, it is difficult for GOEA to obtain the data it needs to manage due to contract terms and the fact that GOEA does not maintain its own database. For example, we requested data records for two fiscal years to conduct tests and analyses we recommend in this report. The vendor submitted a statement of work for approximately \$3,000 to provide the requested records for 35 of the 36 AAAs. After a 70-day process for negotiating access to the appropriate data tables, we opted to cancel the request because of the cost and time involved.

Data management issues exist at the local levels of the aging network as well. Each AAA must enter into a licensing agreement with GOEA's vendor for a specified number of users to enter client and service data to meet federal reporting requirements. According to some COA personnel, the limited number of users and costs associated results in administrative burdens that prevent them from completing assessments on all individuals. The limited number of users also leads to poor data entry practices with staff entering only enough data on clients, assessments, and services requested and provided to meet federal requirements. One AAA reported that it wrote a grant to obtain tablets that allow it to conduct and upload its assessments in the field, thereby eliminating the duplicative work of capturing assessment information on paper and then later entering that same information into a computer system. However, this practice is the exception rather than the rule. Between the focus on federal compliance with little emphasis on how else the data can be used and the use of outdated collection practices, those entities responsible for collecting data are also not maximizing the infrastructure the state has in place.

Recommendation 1: GOEA should evaluate its current practices and skill sets with regard to information technology systems, data collection and data analysis to ensure that the agency and the aging network have the capacity to take full advantage of the information it collects. Specifically,

- GOEA should develop and promote a culture of performance management driven by data in its own agency as well as throughout the network by providing AAA and COA management with guidance and technical support to incorporate performance data into their management processes.
- GOEA should consider hiring a data analyst and investing in appropriate software or should consider modifying the terms of its contract with its current vendor to make custom queries and data extracts and the ability to increase the number of users less cost prohibitive.
- GOEA should develop procedures to ensure that the data collected by AAAs and COAs is reliable and complete (to the extent possible).
- Similar to other state agencies who are modernizing practices related to assessment and monitoring activities, GOEA should assist AAA and COA management with developing the capacity to capture assessment information electronically in the field using tablets that interface directly with SAMS.

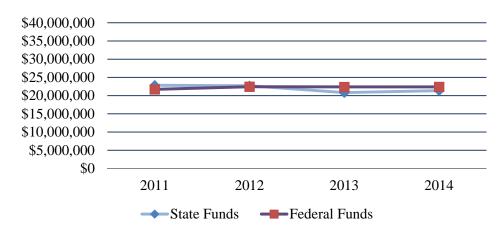

Summary of Management Response: GOEA agrees with the finding but disagrees with the recommendation. GOEA states that it provides in-house training on SAMS, and assessment forms include instructions on how to collect and submit data. By March 2015, GOEA will implement more in-service training to increase AAAs knowledge and understanding of the programs, the clients, and to improve its monitoring skills. SAMS includes a data module to input assessment data electronically in the field, but funding such an initiative is not feasible at this time. (See Appendix A, page 2).

LLA Additional Comments: Although we agree that working with AAAs and COAs to provide more training regarding SAMS will help address part of the gap in data management skills, the strategy described by GOEA does not address its own use of data for processes other than federal compliance reporting. SAMS provides the infrastructure to collect valuable information that would allow GOEA to enhance current planning and monitoring activities. Strategically using data in its processes would allow GOEA to be more effective as an oversight entity with its limited resources.

COAs face numerous challenges in providing quality services, including lack of funding, lack of transportation, and a poor tax and industry base in some communities.

According to our survey results, 49 of 62 (79%) COAs responding to this question cited funding issues as their greatest challenge regarding providing quality services. In addition to lack of funding, COAs also identified stability of existing funding as a primary challenge to providing services. Reduction in state government funding as well as sequester cuts at the federal level have complicated COAs' ability to plan for and provide services. Stability of funding is particularly problematic for smaller COAs that do not have dedicated tax revenue or strong local economies and support. There are only 25 (39.1%) parish COAs who received money from local taxes or millages in fiscal year 2013. The largest example of this tax is the millage for Terrebonne Parish that provided \$6,812,681 in funding for the Terrebonne COA. Exhibit 4 summarizes state and federal funding from fiscal year 2011 to 2014. As the exhibit shows, both state and federal funding have remained relatively flat over the last four years.

Exhibit 4 Federal and State Funding for Older Americans Act Services Fiscal Years 2011 to 2014

Source: Prepared by legislative auditor's staff using data from Louisiana's Office of Planning and Budget.

Some COA staff also cited difficulties in providing services to populations that are rural, socially isolated and have weak local economies. The lack of reliable public transportation in many parishes across the state combined with long distances between communities and amenities in rural areas increases both the COA's cost to serve clients and the client's risk of social isolation. According to the COA survey, only 48% of COAs stated that their parish has reliable public transportation. In addition, some COA staff described an exodus of traditional industry in their area with young people following these jobs out of their communities. This movement of jobs and people not only creates a poorer tax base for millages and limits opportunities for fundraising, but it also creates a more socially isolated population of seniors who lack family supports. According to the COA survey, only 21% of COAs believed they had a strong local economy and 53% felt that the seniors they serve had strong family support.

Louisiana, like other states, will have to serve a growing number of Baby Boomers with different service needs than previous generations.

The population of senior citizens is set to grow exponentially with the aging Baby Boomer generation. Exhibit 5 summarizes the projected growth of the elderly population in Louisiana, both age 60 or over as well as the segment of that population that is most likely to require services, age 85 or over.

Projected Population Aged 60 and Older in Louisiana 1,066,900 1,200,000 846,316 1,000,000 628,540 800,000 600,000 ■ LA 60+ Population 400,000 ■ LA 85+ Population 200,000 0 Census 2000 Projection 2010 Projection 2015 Projection 2020

Exhibit 5

Source: Prepared by legislative auditor's staff using census data.

As the exhibit shows, the population of individuals over 60 is expected to grow steadily in the future. Not only will the number of elderly individuals increase, but the needs of these seniors are anticipated to be vastly different than the needs of generations that have preceded them. Discussed in more detail in Objective 2, other states use funding formula factors that may better identify specific types of need. With a growing number of individuals to serve, targeting resources to those most in need becomes even more important.

Baby Boomers are also expected to work and live longer, remain independent and active longer due to advancements in health care, and are considered more technologically advanced than current seniors. As a result, stakeholders cited the need for the agencies providing services to the elderly to consider this culture shift, both in terms of planning for what services they will provide as well as the way in which those services will be delivered. Modernization in the type of service, the structure to deliver those services, and the management of these services and delivery structure will be necessary for states to effectively navigate this transition.

Recommendation 2: GOEA should evaluate its current service array and determine whether certain services should be modernized to reflect the needs of the next generation of elderly. For example, Baby Boomers may have a greater need for services that support physical activity and socialization.

Summary of Management Response: GOEA agrees with this finding and states that it already has procedures in place that address the recommendation. (See Appendix A, pages 2-3).

Objective 2: How could GOEA improve its management and oversight of the aging network in Louisiana?

With a growing population to serve and limited resources, it is important that GOEA find ways to better target needs and improve oversight of service delivery in the aging network. As the state unit on aging, GOEA is required by federal law to serve as a visible and effective advocate for the elderly. GOEA's management and oversight responsibilities include assessing the needs of the elderly in the state, developing a state plan to address those needs, developing a funding formula to allocate federal funds to AAAs, and monitoring AAAs to ensure that services are delivered. However, we identified the following ways GOEA could better manage:

- GOEA could better manage if it had an executive director to serve as a visible advocate for the elderly as required by federal law.
- Using additional factors in its funding formula may help GOEA better target funding to areas with the greatest needs.
- Using available demographic and waiting list data could enhance GOEA's needs assessment efforts.
- Requiring that AAAs monitor service providers in a consistent manner would help GOEA ensure effective and efficient service delivery.
- Requiring that COAs standardize management practices would help GOEA compare performance and enhance accountability.
- Using SAMS data would help GOEA more comprehensively evaluate compliance and determine if its services are effective at meeting the needs of the elderly.

These are summarized in more detail below.

GOEA could better manage if it had an executive director to serve as a visible advocate for the elderly as required by federal law.

Federal law requires that state units on aging serve as a visible leader and advocate for the elderly. However, GOEA's executive director position has been vacant since March 2012 when the last director resigned. Louisiana Revised Statute 46:931 states that "the office (GOEA) shall be administered by an executive director, who shall be recommended for appointment by the Louisiana Executive Board on Aging to the governor to serve at his pleasure, subject to confirmation by the Senate." Although the Louisiana Executive Board on Aging (LEBA) has recommended one candidate for the position since then, the Governor has not appointed anyone.

This lack of leadership contributes to the agency's inability to fulfill its mission as a visible advocate for the elderly and results in the aging network not having a voice in policy and budget discussions. The absence of a leader has also impacted the agency's ability to effectively manage since no one currently at GOEA has the authority to propose policy changes or improvements to current processes, many of which are recommended in this report. As a result, LEBA and the Governor need to work together to ensure that the agency has a qualified Director with the authority and responsibility to strategically lead GOEA and the aging network.

Using additional factors in its funding formula may help GOEA better target funding to areas with the greatest needs.

The Older Americans Act requires that states develop funding formulas that detail how federal funds will be disbursed across the state. Although other factors such as legislative dedications and state and local sources determine each parish's total funds, the purpose of the formula is to provide a mechanism for states to allocate federal funds based on geographic distribution of older individuals, older individuals with greatest economic need, and older individuals with the greatest social need, with particular attention to low-income minority populations.

GOEA currently provides a base allocation of \$12,000 per parish and then distributes the remaining federal funds to AAAs through its intrastate funding formula that considers the number of individuals in each parish over 60, the number of individuals over 75, the size of the parish, and the number of individuals over 60 in poverty based on federal census data. Although Louisiana's factors were approved by the Administration on Aging, other states use factors that may better target social need, such as the prevalence of minorities and persons with disabilities and whether the parish is rural or urban. Exhibit 6 summarizes the different factors used by the 45 states we reviewed.

Exhibit 6 Factors Used in Funding Formula Louisiana and 45* Other States						
Factors Used	Factors Used Number of States Using Factor in Louisiana?					
Poverty	45	Yes				
Age (60 or older)	44	Yes				
Minority	43	No				
Level of Frailty	25	Yes				
Rural	24	No				
Disability	8	No				
Lives Alone	6	No				
Land Mass	5	Yes				
Medically Underserved 5 No						

*Note: Funding formula components were available in 45 of the 50 state plans that were analyzed. **Source:** Prepared by legislative auditor's staff using information from other state plans and Louisiana's state plan.

Because of the growing population to serve and limited resources, identifying needs in the state and targeting resources to those clients most in need is important. Although Louisiana's formula includes poverty and age 75 or over as factors intended to identify need, research² on the Older Americans Act population shows that socioeconomic and demographic information do not consistently identify needs for some groups served. Therefore, identifying the number of eligible individuals with disabilities or limitations to activities of daily living (ADLs) may better compensate parishes that serve populations with greater need. In addition, a 2012 report by the Government Accountability Office recommended using information on ADL limitations as a way to better target needs.

Other factors used in Louisiana's formula to distribute funds may not measure what they intend to measure. For example, Louisiana's land mass factor is intended to compensate for rural parishes. However, without considering population density, land mass alone does not indicate whether an area is rural or urban. As noted in the exhibit, 24 other states specify whether a service area is rural. In addition, according to GOEA staff, their poverty factor addresses both poverty and minority as those minorities served through these programs usually also meet the criteria for poverty. However, 43 of the 45 states we reviewed included a separate minority factor in their formula. Including minorities in the funding formula is important since funding formula guidance encourages states to pay "particular attention to low-income minority older populations."

Using the Elder Needs Index as part of its funding formula may help target areas with the greatest need. The Administration on Aging provided a grant to Florida to develop an Elder Needs Index for all 50 states which was published in January 2011.³ This index is used as

² The Administration on Aging commissioned a series of research briefs "Putting Data to Work for Older People" from the Mathematica Policy Research group.

³ The project used 2000 U.S. Census Bureau data and other sources to create maps to assist professional service planners, agency directors, and policy makers with their planning endeavors to better target elders in greater need for support and caregiving. Because the data is from 2000, the results for Louisiana may not be representative of current estimates.

a planning resource for states on the National Association of State Units on Aging and Disabilities website. The index ranks geographical areas according to the characteristics of the resident elderly population. The selection of factors used in the index target the Older Americans Act's intention to focus on elderly populations that are isolated, either racially or culturally, in poverty or disabled. The results of Louisiana's 2011 index showed that Tensas Parish had the highest needs index score and Cameron Parish had the lowest needs index score. Of the five parishes scoring the highest on the needs index, three are a part of the North Delta AAA. Exhibit 7 summarizes the five parishes with the highest needs score and the five parishes with the lowest needs score. Although the current index is likely outdated, conducting a similar analysis may provide a more detailed picture of need than Louisiana's current formula.

Exhibit 7 Elder Needs Index Scores Five Highest and Five Lowest by Parish				
Parishes with Highest Needs Score				
Tensas Parish	35.06			
East Carroll Parish	34.94			
Orleans Parish	33.99			
St. Helena Parish	32.70			
Madison Parish 32.32				
Parishes with Lowest Needs	Score			
Bossier Parish	19.24			
St. Bernard Parish	18.98			
Livingston Parish	18.05			
St. Tammany Parish	16.57			
Cameron Parish 16.20				
Source: Prepared by legislative auditor's staff using data from Louisiana's Elder Need Index.				

Recommendation 3: GOEA should evaluate its current use of funding formula factors and determine whether additional or alternative factors or other sources of information, such as the elder needs index may better allocate funding to parishes with the greatest needs.

Summary of Management Response: GOEA disagrees with this finding. GOEA's current funding formula was approved by the Administration on Aging in 2011 and is reviewed and approved every four years in conjunction with the submission of Louisiana's state plan. The current formula meets all federal requirements and guidelines. The approved funding formula allows for targeting funding areas with the greatest needs and allows for equitable funding as necessary to the small rural parishes as well as the large urban parishes. (See Appendix A, page 3).

LLA Additional Comments: Although the formula may comply with federal guidelines, it could use additional factors, such as prevalence of minorities, whether the parish is rural or urban, as well as number and type of ADL impairments for the population in each parish. Use of these factors may help GOEA target limited resources to serve the growing population of Baby Boomers mentioned on page 11.

Using available demographic and waiting list data could enhance GOEA's needs assessment efforts.

The Older Americans Act requires that states develop plans detailing procedures for evaluating need and identifying the capacity of resources in the state to meet that need. As part of the state planning process, states are required to assess the needs of the community. GOEA and AAAs use a variety of methods to assess the needs of the elderly. Both collect demographic data from the census and other sources, such as the Administration on Aging. Both also conduct public meetings and surveys to obtain feedback from the community on what kinds of services are needed in their area.

GOEA could better evaluate needs by using demographic and other assessment **information captured in its data system.** COAs use SAMS to input assessment data on elderly clients, including what activities of their daily lives are impaired, whether clients live alone or are homebound, and whether clients are at nutritional risk. COAs are also required to input what services each client receives. As described earlier, GOEA's current use of SAMS data consists primarily of federal compliance activities, such as reporting on the number of service units and clients served. However, GOEA could use this data to develop a statewide profile of needs. Exhibit 8 provides a profile of individuals receiving services in fiscal year 2013 by specific indicators based on an existing SAMS report.

Exhibit 8 Profile of Individuals Receiving Services by Need Fiscal Year 2013				
Need Indicator Number Percent				
In Poverty	52,790	72%		
Lives Alone	28,842	39%		
High Nutritional Risk	25,948	35%		
Rural	24,370	33%		
Greater than Six Instrumental Activities of				
Daily Living (IADLs)* Impaired	8,407	11%		
Six Activities of Daily Living (ADLs)**				
Impaired 1,837 3%				
Total Unique Individuals Served 73,825				

*Note: IADLs include housework, managing money, taking medication, preparing and cleaning up after meals, shopping for groceries and clothes, etc.

**Note: ADLs include bathing, dressing, using the toilet, transferring to and from bed or

Source: Prepared by legislative auditor's staff using data from SAMS.

GOEA management and AAAs could also use this assessment data to inform what type of services should be offered in what areas to meet specific needs. For example, according to assessment data, 35% of clients served in fiscal year 2013 were assessed as a high nutritional risk. Nutritional risk is determined by an individual's eating habits, access to balanced meals, and physical limitations such as the ability to swallow, bite or chew. If reviewed on a parish level, GOEA could determine which parishes have higher percentages of individuals with nutritional risks and may therefore need to focus their resources on programs to address this risk, such as home delivered meals or congregate meals. For example, Caddo COA assessed 1,771 of the 2,245 (79%) of its clients as having high nutritional risks whereas Red River COA assessed only 10 of its 585 (2%) clients as having high nutritional risks. Similarly, AAA management could use these reports when developing their area plans of service. Appendix G shows the percent of clients served at each parish COA assessed by need indicator.

GOEA management could also develop more specific SAMS reports to better use data collected in identifying needs. Exhibit 8 above is based on an existing report developed by GOEA's vendor. However, GOEA also collects additional data in SAMS that would allow it to better assess whether its services are meeting its intended goal - to help elderly individuals remain in the community and to prevent nursing home or other institutional placement. For example, a research brief ⁴ prepared for the Administration on Aging describes three or more ADL limitations as an indicator of increased risk for nursing home placement. However, GOEA's report only includes a measure of six ADLs which may understate the need of the population. Capturing information on the number of people served who have impairments in three or more ADLs would allow GOEA to identify those individuals most at risk of nursing home placement.

GOEA's report also does not allow a user to see the number of unique clients who fit multiple criteria. For example, knowing the number of clients that both live alone and have three or more ADL impairments would be a better measure for the extent of need. In addition, GOEA's assessment forms capture the specific ADLs reported by each client. COAs enter this data into a companion database maintained by the same vendor. A report that captures both the type and number of ADLs in a parish would provide a better description of need in that area.

Quantifying waiting list data could help GOEA measure unmet need in each area. According to GOEA, COAs should track which clients are waiting for services; however, COAs collect and maintain this information inconsistently. According to our survey of the 64 COAs, only 38 (59.4%) maintain waiting lists in SAMS. The remainder either keep hardcopy written lists or do not maintain waiting lists. Exhibit 9 provides an estimate of what services have waiting lists and how many are on those lists as reported by COAs on the survey as of June 30, 2014.

⁴ The Administration on Aging commissioned a series of research briefs from the Mathematica Policy Research group. The series "Putting Data to Work for Older People" cites risk factors associated with nursing home placement in its July 2010 brief titled "Aging in Place: Do Older Americans Act Title III Services Reach Those Most Likely to Enter Nursing Homes?".

Exhibit 9
Services with Waiting Lists and Number Waiting
As of June 2014

Source: Prepared by legislative auditor's staff using self-reported data from the COA survey.

As the exhibit shows, Home Delivered Meals and Homemaker Services have the largest waiting lists reported. However, because the numbers above are self-reported by COAs in their responses to our survey, the risk exists that they underestimate the level of unmet need based on the different practices for maintaining waiting lists. If GOEA required that COAs maintain all waiting lists in SAMS, it could use this information to more accurately quantify what services are most needed in each area and to identify areas where capacity does not meet demand. This information could be used to show unmet needs and would also be helpful to justify funds for certain services during legislative budget hearings.

Recommendation 4: GOEA should use SAMS assessment data and waiting lists to evaluate needs in each parish and throughout the state. GOEA should first ensure that COAs follow standardized procedures to maintain waiting lists consistently.

Summary of Management's Response: GOEA agrees with this finding and implemented procedures in September 2014 to satisfy this recommendation. (See Appendix A, pages 3-4).

Requiring that AAAs monitor service providers in a consistent manner would help GOEA ensure effective and efficient service delivery.

GOEA monitors compliance with federal program and financial requirements on a limited basis by conducting program monitoring site visits of all AAAs once every four years

(i.e., at least once per planning cycle). GOEA conducts initial assessments on all AAAs in the first three years of the monitoring cycle with re-assessments to follow up on findings conducted in the last year. However, for the planning cycle that begins in October 2015, GOEA plans to assess all AAAs each year. These site visits determine whether AAAs are in compliance with their area plan, meaning that they offer the approved services in their plan and that they are following Older American Act guidelines and GOEA requirements. This on-site monitoring typically consists of a small sample review of five clients' files randomly selected at each AAA to ensure that these clients actually received services and they were assessed as required. GOEA also conducts financial monitoring by reviewing AAA budgets for allowed costs and reasonableness, reviewing annual CPA reports, and conducting periodic site visits to review a sample of transactions for compliance with federal requirements.

AAAs are responsible for monitoring contracted providers and COAs to ensure services are delivered; however, some AAAs have not developed a monitoring process and others monitor inconsistently. AAAs are responsible for contracting with service providers and ensuring that services are actually delivered. Although GOEA has provided AAAs with sample tools, AAAs have not consistently implemented these tools. According to GOEA's monitoring reports, 10 AAAs have not developed monitoring tools or practices. Other AAAs monitor services using methods of varying quality, including satisfaction surveys, review of monthly service reports, and quarterly site visits. Because of GOEA's current monitoring schedule, deficiencies in AAAs oversight of contracted providers may not be promptly addressed. Follow-up assessments occur in the last year of the cycle, meaning that corrective action for deficiencies identified in the first year may not be verified for up to 2-3 years.

As stated above, GOEA plans to adjust its monitoring schedule with the October 2015 planning cycle to assess every AAA each year which may help strengthen oversight of providers. However, GOEA should also consider requiring AAAs to implement additional controls to improve oversight of contracted providers. For example, some AAAs reported stronger practices for ensuring that services are delivered. CAJUN AAA requires that contract providers have performance based contracts, meaning the providers must submit evidence that they delivered the service before they are reimbursed for providing the service. CAJUN also contracts with local CPAs to perform agreed-upon procedures that review provider operations.

Recommendation 5: GOEA should ensure that AAAs follow standardized procedures to monitor activities of service providers and ensure that services are provided with the same accountability across the state.

Summary of Management's Response: GOEA agrees with this finding and states that the recommendation made as a result of this audit is already in place. (See Appendix A, page 4).

⁵ Sample sizes start at five client files although program monitors may review more files based on their discretion. In the current planning cycle, some program monitors reviewed samples of up to 15 files per COA, with one to two COAs sampled for the multi-parish AAAs. According to GOEA staff, samples are selected randomly and do not consider characteristics of the whole population to ensure that samples are representative of total population.

Requiring that COAs standardize management practices would help GOEA compare performance and enhance accountability.

As demonstrated by the way the aging network structure evolved in Louisiana, local COAs and AAAs maintain a large degree of autonomy in their local management and operations. Some former directors and external stakeholders cited resistance from the COAs as a challenge to implementing new management processes and efforts to alter the current structure of the network. Although a degree of local autonomy is appropriate to this function to ensure responsiveness to the community served, local autonomy should not hinder the state's ability to evaluate performance and ensure accountability.

The wide range of management practices among COAs makes it difficult to compare performance. We observed a wide range of management practices from one COA/AAA to another in terms of planning, identifying service needs and reporting services and financial information. The range in quality and methods of management practices made it difficult for us, and GOEA, to compare the performance and operations of the various COAs across the state, which is an important oversight function. GOEA's ability to use the data collection infrastructure it already has in place to improve oversight is dependent on a standardized data collection and entry practice at each of the COAs. However, as discussed in Objective 1, some COA personnel stated that the limited number of users prevent them from collecting all information from clients in the assessment process. Some COA staff also reported that they only enter enough of a client's information into the data system to meet minimum federal reporting requirements. In addition, as previously discussed, methods to assess need and unmet needs, maintenance of waiting list information, and AAA monitoring of contractors/service providers would also benefit from some degree of standardization.

If certain management practices were standardized, GOEA could also better compare administrative costs and other indicators of efficiency. The federal government requires that AAAs spend no more than 10% of their federal funds on administrative costs with the remainder spent on direct service delivery. GOEA is responsible for ensuring that AAAs/COAs do not exceed this percentage. However, there is no requirement on how much of state and local funds should be spent on administrative costs. Therefore, COAs can supplement administrative costs through state and local funds and thus may spend more on administration than on service delivery.

As a measure of efficiency, we compared administrative costs to total funding received by each COA. We found that administrative costs ranged from 0.03% for the Ascension COA to 81.8% for the Iberville COA for fiscal year 2013, with 31 COAs reporting administrative costs that exceeded 20% of total revenue.⁶ However, this analysis provides limited information because GOEA has not developed a standard definition of administrative costs. As a result, there is no assurance that COAs are defining or accounting for these costs consistently in their

21

⁶ There are no benchmarks related to a maximum percentage of a service organization's budget that should be spent on administrative costs. Based on the mission of the organization, we assume that its management would strive to spend as much of its resources on service delivery rather than on administration.

financial statements, which makes comparisons among COAs difficult. Appendix H provides a comparison of each COA's administrative costs.

Recommendation 6: GOEA should develop standard reporting and data collection practices and procedures for COA activities and ensure that COAs implement them. Specifically, policies should address the following:

- Consistent assessment and data entry practices related to client needs.
- A standard practice for maintenance of waiting list information in SAMS.
- Standardized monitoring practices and tools for AAAs to monitor service providers.
- Standard accounting practices and a definition of administrative costs so that GOEA can compare these costs among COAs.

Summary of Management Response: GOEA disagrees with this finding and the recommendation. GOEA states that it contracts with the AAAs to ensure the data collected and entered into SAMS is consistent and that the COAs are adhering to all policies and procedures of GOEA. In addition, GOEA's contracts with the AAAs require compliance with Title 45 Code of Federal Regulations (CPR), Part 74, Administration of Grants. These federal regulations refer to OMB Circular A-122, Cost Principles for Non-Profit Organizations. This circular provides definitions and guidance on administrative costs. Administrative costs will vary among COAs because of the unique factors and circumstances of the clients being serviced.(See Appendix A, pages 4-5).

LLA Additional Comments: Based on observations of inconsistent practices throughout our audit work, we disagree that GOEA's current means for ensuring that information is consistent and comparable is sufficient. Because part of the role of an oversight entity is to evaluate and monitor performance and operations, it is important that GOEA ensure that information it uses to manage is consistent and comparable from one COA to the next. A policy or contract term that is not monitored and enforced to ensure that it has its intended results is of little practical use as a management tool.

In addition, as stated in the report, administrative costs reported in financial statements vary from 0.03% to 82% for entities providing the same services. When we requested an explanation from GOEA regarding this wide range, GOEA staff stated that the range was the result of COA management using different definitions and therefore different cost allocation practices for administrative costs and did not refer to any standardized guidance provided. Although GOEA states guidance for the definition of administrative costs is provided in federal regulation (OMB Circular 122-A), this range and the fact that 31 COAs reported administrative costs that exceeded 20% would indicate that COAs are not consistently using the definition.

Using SAMS data would help GOEA more comprehensively evaluate compliance and determine if its services are effective at meeting the needs of the elderly.

During the most recent four-year cycle of program monitoring, the primary compliance issues identified were issues with client assessments: 21 of 36 (58.3%) AAAs did not have complete assessments on their clients and 17 of 36 (47.2%) did not conduct the assessment timely (annually). Using SAMS data to monitor compliance would allow GOEA to assess whether AAAs are in compliance with their area plans in a more efficient and comprehensive way. For example, GOEA could determine whether assessments were complete and timely for the entire population instead of for the small sample sizes they currently use.

GOEA could also evaluate efficiency more comprehensively by conducting parish level comparisons using SAMS and expenditures data. As a part of the AAA plan review process, GOEA currently calculates a statewide average cost per unit of service based on budgeted federal costs by AAA. GOEA requires AAAs to justify unit costs that exceed the statewide average. For our analysis, we compared unit and client cost per service that includes all reported expenditures for the top four Older Americans Act services. This type of analysis may allow GOEA to identify factors that influence the cost of each service by parish such as differences in wages for workers, size of parish, centralization of populations served, and differences in accounting and contracting practices. Exhibit 10 shows statewide statistics for the services analyzed and Appendix I shows the unit and client costs for each service by parish COA.

Exhibit 10 Comparison of Statewide Unit and Client Costs per Service						
Average Range of Unit Average Annual Range of Annual Unit Cost Costs Client Cost Client Costs						
Congregate Meals	\$6.65	\$3.24 to \$13.35	\$486.32	\$221.28 to \$1,545.40		
Home Delivered Meals	\$6.26	\$3.15 to \$13.59	\$1,027.38	\$498.70 to \$1,865.59		
Homemaker Services	\$20.88	\$1.16 to \$50.34	\$669.77	\$8.57 to \$1,791.30		
Transportation	\$14.73	\$3.06 to \$41.46	\$1,068.52	\$175.69 to \$4,157.28		
Source: Prepared by legislative auditor's staff using data from SAMS and expenditures data from GOEA.						

In addition to monitoring compliance, GOEA could better use data to evaluate whether its services are effective at meeting the needs of the elderly. Since the mission of GOEA is to meet the needs of the elderly, GOEA could use SAMS assessment data to determine if individuals are actually receiving services that meet their identified risks and needs. For example, in fiscal year 2013, COAs assessed 25,948 individuals as having high nutritional risk, meaning that the individual had a combination of risk factors including eating fewer than two meals a day, not having sufficient types of food (fruit, vegetables, dairy), had difficulty eating, or had health problems that required changing their eating habits. However, only 17,133 (66%) of these individuals received some type of nutrition service, meaning the remainder (8,815 or 34%) did not receive a nutrition related service although they were assessed as high nutritional risk. Although there are reasonable explanations for why individuals may not receive a service they were identified as needing, such as being on a waiting list or declining the service, GOEA does

not track this information. We also evaluated the percentage of people who received a nutrition service in fiscal year 2013 to determine what percentage of those receiving the service were high risk and what percentage were not high risk.⁷ Exhibit 11 summarizes this information.

Exhibit 11 Percentage of High Risk and Not High Risk Individuals Receiving a Nutrition Service Fiscal Year 2013					
Nutrition Service Not High Risk High Risk					
Congregate Meals	75.36%	24.64%			
Home Delivered Meals 42.21% 57.79%					
Nutrition Counseling 77.07% 22.93%					
Nutrition Education 55.25% 44.75%					
Source: Prepared by legislative auditor's staff using data from SAMS.					

As shown previously, many of the individuals who received nutrition services were not high nutrition risk. Since Home Delivered Meals is the most requested service and the service with the longest waiting list, GOEA should ensure that this service is delivered to the individuals with the highest risk. If this analysis were conducted by parish, GOEA could use this data to determine which COAs are more effective than others at meeting identified needs. Appendix J provides a nutrition risk to nutrition service comparison by COA.

Recommendation 7: GOEA should use SAMS data to supplement its compliance monitoring process. (See Appendix A, page 5).

Summary of Management's Response: GOEA disagrees with this finding and also disagrees with this recommendation. GOEA states that it currently utilizes SAMS data to monitor both the AAAs and the COAs.

LLA Additional Comments: Although GOEA uses SAMS on a limited basis to monitor each AAA to ensure services required by their area plan were provided, using data would allow them to supplement site visits and sample file reviews with tests of the entire population.

Recommendation 8: GOEA should evaluate service unit costs and cost per individual served among COAs to help evaluate efficiency and cost-effectiveness of service delivery among COAs.

⁷ Nutrition risk is not the only relevant factor to demonstrate a need for home delivered meals. High nutrition risk by service is included in an existing SAMS report for federal reporting. GOEA's current data limitations did not allow us to test for other relevant criteria, such as homebound with relevant ADL limitations, etc.

Summary of Management Response: GOEA disagrees with this finding and with this recommendation. GOEA states that through current monitoring procedures, information submitted by AAAs, and access to the data entered into SAMS, GOEA monitors unit costs at the AAA level. (See Appendix A, page 6).

LLA Additional Comments: While GOEA states that they evaluate unit costs at the AAA level, we recommend that it should evaluate unit costs at the COA level since COAs are the entities providing services. In addition, as stated in the report, GOEA evaluates federal budget costs by AAA rather than actual expenditures from all sources of funds by COA. Using federally budgeted costs by AAA does not allow for a comparison of efficiency for service delivery at the parish level.

Recommendation 9: GOEA should use SAMS assessment data and service data to determine if services provided are effective at meeting the specific risk factors and needs of individuals served. (See Appendix A, page 6).

Summary of Management Response: GOEA disagrees with this finding and recommendation. GOEA states that it currently utilizes data entered into SAMS to monitor its contracts and to report to its federal funding agency. However, GOEA states that it will review this process and consider whether using SAMS assessment data to determine if services being provided are effective is feasible at the GOEA level.

LLA Additional Comments: While GOEA uses data to report statistics for federal compliance purposes, it does not comprehensively use data to evaluate whether COA services are effective at meeting the needs of the population they serve. For example, in one parish, 83% of individuals assessed as high nutrition risk did not receive a nutrition service.

APPENDIX A: MANAGEMENT'S RESPONSE

State of Louisiana office of the governor office of elderly affairs

September 24, 2014

Mr. Daryl G. Purpera, CPA, CFE Legislative Auditor Post Office Box 93497 Baton Rouge, Louisiana 70804-9397

RE: Performance Audit Governor Office of Elderly Affairs

Dear Mr. Purpera:

Thank you for the opportunity to comment on the Governor's Office of Elderly Affairs' Performance Audit; titled "Management and Oversight of the Aging Network of Louisiana." The Governor's Office of Elderly Affairs wishes to express sincere thanks to you and your audit team for the time, energy and effort demonstrated during the audit progression. Your team was professional, competent and respectful throughout the audit process. Please find enclosed GOEA's reply to this audit. The Governor's Office of Elderly Affairs is proud of its success.

Please feel free to contact me at 225-342-7100 or at kjryder@goea.la.gov should you have any questions regarding the Office's response to the Performance Audit report and its observations.

Sincerely,

Karen J. Ryder

Deputy Assistant Secretary, Governor's Office of Elderly Affairs

Finding 1: Not all entities in Louisiana's aging network have the appropriate skills sets to effectively manage data.

Recommendation 1: GOEA should evaluate its current practices and skill sets with regard to information technology systems, data collection and data analysis to ensure that the agency and the aging network have the capacity to take full advantage of the information it collects. Specifically:

- GOEA should develop and promote a culture of performance management driven by data in its own agency as well as throughout the network by providing AAA and COA management with guidance and technical support to incorporate performance data into their management processes.
- GOEA should consider hiring a data analyst and investing in appropriate software or should consider modifying the terms of its contract with its current vendor to make custom queries and data extracts and the ability to increase the number of users less cost prohibitive.
- GOEA should develop procedures to ensure that the data collected by AAAs and COAs is reliable and complete (to the extent possible).
- Similar to other state agencies who are modernizing practices related to assessment and monitoring activities, GOEA should assist AAA and COA management with developing the capacity to capture assessment information electronically in the field using tablets that interface directly with SAMS.

GOEA agrees with the finding but disagrees with your recommendations. GOEA will work more closely with the Area Agencies on Aging (AAAs) and COAs. GOEA currently offers in-house SAMS training upon request. SAMS is a federal reporting data system. GOEA's current data collection form for SAMS includes instructions on how to collect and submit data. If pertinent information is missing from the entered assessment, an error report is reviewed at year end. By March 2015, GOEA will implement more inservice training to increase the AAA's knowledge and understanding of the programs, the, clients, and to improve their monitoring skills. GOEA will forward your recommendation to the Boards of Directors for each AAA and COA to make them aware of need for training their employees. SAMS includes a data module to input assessment data electronically in the field, but funding such an initiative is not feasible at this time. Due to the staff turn over rate both in house and in the field, GOEA agrees there is a continual need for training. GOEA will work to the best of its ability to meet this need.

Finding 2: Louisiana, like other states, will have to serve a growing number of Baby Boomers with different service needs than previous generations.

Recommendation 2: GOEA should evaluate its current service array and determine whether certain services should be modernized to reflect the needs of the next generation of elderly. For example, Baby Boomers may have a greater need for services that support physical activity and socialization.

GOEA agrees with this finding, but the recommendation made as a result of the audit is already in place. The AAAs conduct a community needs assessment with consumers, other providers, community agencies, local government officials and the general public. This assessment is part of their area plan and is required for all 36 AAAs to receive funding. More than 6 out of 10 Baby Boomers will be managing multiple chronic illnesses by the 2030s. GOEA has implemented an evidence based wellness program to help prepare the aging population to manage these chronic diseases. Louisiana has implemented an Aging and Disability Resource Center (ADRC) and SenioRX program. The Louisiana SenioRx and the ADRC programs are now combined into a single one-stop shop. Now, seniors, adults with disabilities, caregivers, and service providers have one place to access services so they can live independently. GOEA has implemented a statewide single point of access for prescription assistance and other support for baby boomers and adults with disabilities at www.LouisianaAnswers.com. These resources help meet the needs of the elderly or those living with a disability. Centers are located in nine regions that provide coverage to the entire state. AAAs provide training, support and registry for caregivers of seniors and adults with disabilities. The Office of Elderly Affairs experienced its first influx of Baby Boomers in 2006 with a tapering expected to occur in 2024. GOEA will strongly emphasize that meeting the needs of Baby Boomers is a priority for all AAAs and COAs.

Finding 3: Using additional factors in its funding formula may help GOEA better target funding to areas with the greatest needs

Recommendation 3: GOEA should evaluate its current use of funding formula factors and determine whether additional or alternative factors or other sources of information, such as the elder needs index may better allocate funding to parishes with the greatest needs.

GOEA's disagrees with this finding. GOEA's current funding formula was approved by the Administration on Aging within the U.S. Department of Health and Human (HHS) Services in 2011 and is reviewed and approved every 4 years in conjunction with the submission of Louisiana's state plan. The current formula meets all federal requirements and guidelines. In the approval process for the current funding formula, GOEA consulted with area agencies and published the proposed formula in the Louisiana Register for review by the general public. By publishing the proposed formula prior to submitting it for approval by the federal agency, GOEA allowed for comment and feedback by older persons, agencies and other stakeholder organizations. The approved funding formula that is currently implemented allows for targeting funding areas with the greatest needs and allows for equitable funding as necessary to the small rural parishes as well as the large urban parishes.

Finding 4: Using available demographic and waiting list data could enhance GOEA's needs assessment efforts.

Recommendation 4: GOEA should use SAMS assessment data and waiting lists to evaluate needs in each parish and throughout the state. GOEA should first ensure that COAs follow standardized procedures to maintain waiting lists consistently.

GOEA agrees with this finding and has procedures in place that satisfy this recommendation. GOEA currently utilizes waiting lists in performing needs assessments. The results of the needs assessments are used to evaluate needs in the planning and service area of each Area Agency on Aging.

It is the responsibility of the Area Agencies on Aging to ensure that waiting lists are entered into SAMS at the Council on Aging (COA) provider level. GOEA implemented a Technical Assistance Memorandum in September 2014 to the Area Agencies on Aging requiring that all waiting lists be entered into SAMS. This notification will help to ensure that providers are utilizing SAMS to the maximum efficiency available.

Finding 5: Requiring that AAAs monitor service providers in a consistent manner would help GOEA ensure effective and efficient service delivery.

Recommendation 5: GOEA should ensure that AAAs follow standardized procedures to monitor activities of service providers and ensure that services are provided with the same accountability across the state.

GOEA agrees with this finding and the recommendation made as a result of the audit is already in place. The AAAs monitor their service providers differently based on the type of contractual arrangement that is in place. GOEA currently provides a monitoring document that may be used by AAAs. Use of GOEA's monitoring document is not mandatory, but it is required that AAAs address all the criteria included on the GOEA document in the tool that is used. In addition, all federally funded Title III services being provided across the state are entered and maintained in SAMS, the federal data reporting system. GOEA monitors all 36 AAAs through site visits and audits of records every year. The federal Administration on Aging within HHS also performs an annual quality assurance audit on randomly selected clients who are receiving services from AAAs across the state to ensure quality and to determine if the clients are receiving uniform services. In March 2015, GOEA intends to offer in their annual training additional emphasis on monitoring responsibilities of AAAs.

Finding 6: Requiring that COAs standardize management practices would help GOEA compare performance and enhance accountability

Recommendation 6: GOEA should ensure that COAs implement standard reporting and data collection practices and procedures. Specifically, policies should address the following:

• Consistent assessment and data entry practices related to client needs.

- •A standard practice for maintenance of waiting list information in SAMS.
- •Standardized monitoring practices and tools for AAAs to monitor service providers.
- •Standard accounting practices and a definition of administrative costs so that GOEA can compare these costs among COAs.

GOEA disagrees with this finding and also disagrees with the recommendations. GOEA contracts with the AAAs to ensure that the data collected and entered into SAMS is consistent and that the COAs are adhering to all policies and procedures of GOEA. Refer to GOEA's response regarding waiting list in Finding #5.

In addition, GOEA's contracts with the AAAs require compliance with Title 45 Code of Federal Regulations (CFR), Part 74 Administration of Grants. These federal regulations refer to OMB Circular A-122 (Cost Principles for Non-Profit Organizations). This circular provides definitions and guidance on administrative costs. Due to the level of funding received, 35 of the 36 AAAs receive an annual audit in which an independent auditor opines as to whether the financial statements are presented fairly in accordance with U.S. Generally Accepted Accounting Principles (GAAP). As part of GOEA's monitoring procedures, audit reports are reviewed each year. Administrative costs will vary among COAs because of the unique factors and circumstances of the clients being serviced. COAs contract with AAAs to provide services on a unit-cost reimbursement basis. GOEA is aware of the unit costs of each COA because the service procurement documents for these contracts are submitted to GOEA and approved every 4 years along with the area plans.

Finding 7: Using SAMS data would help GOEA more comprehensively evaluate compliance and determine if its services are effective at meeting the needs of the elderly

Recommendation 7: GOEA should use SAMS data to supplement its compliance monitoring process.

GOEA disagrees with this finding and also disagrees with this recommendation. The AAAs perform needs assessments that are used to provide services to clients within available funding levels based on greatest need. GOEA currently utilizes SAMS data to monitor both the AAAs and the COAs. In addition, GOEA submits an annual report to the federal Administration on Aging within HHS, and this agency uses the information reported to monitor the State and the AAAs. The Administration on Aging annually conducts quality assurance audits of the State. These audits include a review of the AAAs, the providers, and the service delivery areas. Through annual site visits and audits of records, GOEA will continue to ensure that AAAs are effectively monitoring the service providers. GOEA believes its process of evaluating the information reported by the AAA is sufficient at this time.

Recommendation 8: GOEA should evaluate service unit costs and cost per individual served among COAs to help evaluate efficiency and cost-effectiveness of service delivery among COAs.

GOEA disagrees with this finding and with this recommendation. Through current monitoring procedures, information submitted by AAAs, and access to the data entered into SAMS, GOEA monitors unit costs at the AAA level. In addition, contracts in place with AAAs allow GOEA to oversee the service delivery responsibilities at the COA and provider levels.

Recommendation 9: GOEA should use SAMS assessment data and service data to determine if services provided are effective at meeting the specific risk factors and needs of individuals served.

GOEA disagrees with this finding and with this recommendation. GOEA currently utilizes data entered into SAMS to monitor its contracts and to report to its federal funding agency. The Administration on Aging within the U.S. Department of Health and Human Services uses this data to monitor the State and the AAAs. Since GOEA does not direct deliver services, GOEA does not receive an assessment; however, GOEA will review this process and consider whether using SAMS assessment data to determine if services being provided are effective is feasible at the GOEA level.

APPENDIX B: SCOPE AND METHODOLOGY

We conducted this performance audit under the provisions of Title 24 of the Louisiana Revised Statutes of 1950, as amended. This audit generally covered state fiscal year 2013 (July 1, 2012 through June 30, 2013). In some cases, we extended our scope to include historical and/or current information. The audit objectives were as follows:

- 1. What challenges does Louisiana face in providing services to the elderly?
- 2. How could GOEA improve its management and oversight over the aging network in Louisiana?

The scope of our audit was significantly less than a performance audit conducted in accordance with *Government Auditing Standards*. This report provides historical and current information that we obtained, reviewed, and compiled relating to the funding, operations and oversight of Older Americans Act service delivery in Louisiana. This audit was not performed in accordance with all *Government Auditing Standards* issued by the Comptroller General of the United States. For example, we did not test the reliability of data used in this report and in some cases relied on self-reported data from the Councils on Aging. We also did not review all of GOEA management activities or AAA/COA activities. We believe the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives. To answer our audit objectives, we performed the following steps:

- Researched and reviewed relevant federal and state legal statutes, agency policies, regulations, and best practices criteria related to GOEA funding, service delivery planning and the delivery of those services, and program monitoring.
- Interviewed GOEA program staff at the state level, AAA and COA staff at the local level, and other stakeholders in the Aging Network including elder advocacy groups, organizations with aging-related missions, other State Directors, and former GOEA employees to identify issues and challenges in the delivery of services to the elderly as well as the monitoring of this delivery.
- Obtained and analyzed financial statements for each COA to determine levels of funding from GOEA, other federal/state sources, local private means, and local public means. Compared the total funding received by each COA to administrative costs.
- Obtained and analyzed SAMS and expenditures data reports to determine the number of unique clients served in each parish and the costs associated with delivering particular services in each parish.

- Developed and conducted a survey of COA directors to identify general parish information, employment statistics, top services requested by the elderly, and issues and challenges in delivering services to the elderly.
- Developed parish profiles in Appendix L of this report using demographic information from the U.S. Census Bureau; staffing, and requested service, waiting list, and supplemental service information that was self-reported by COAs in our survey; sources of revenue and administrative costs from fiscal year 2013 COA financial statements; and SAMS units of service, clients served, and expenditures reports provided by GOEA for July 1, 2012 through June 30, 2013. Each COA was provided with an opportunity to review and confirm the information provided in its profile before publishing. The profiles reflect any corrections provided to self-reported information.

APPENDIX C: BACKGROUND, FUNDING, AND SERVICES

The federal Older Americans Act (OAA) of 1965 was enacted to help older individuals remain in their homes and communities as long as possible. Under this Act, states receive funding through a formula based on the number of residents age 60 or over. While all adults age 60 or over are eligible for these services, the OAA requires states to target or prioritize services to older individuals with the greatest economic and social need. Services provided under this act include home delivered meals and personal care services that are designed to help the aging population remain independent in their homes as well as other programs to promote health and well-being.

In fiscal year 2013, Louisiana expended \$39.8 million in federal, state and local funds for OAA services and served a total of 73,825 individuals. Federal regulations allow program participants to also contribute toward the cost of services they receive. In fiscal year 2013, participants in these programs contributed over \$2 million. Exhibit 12 summarizes the services authorized by Title III of the OAA and the amount of funds spent in Louisiana for these services.

Exhibit 12							
Title I	II Services and Federal, State, Local I Fiscal Yea		and Client C	ontributions			
Title	Types of Services	Federal	State	Local	Client		
Title III-B: Supportive Services and Senior Center Programs	Adult Day Care, Adult Day Health Care, Assisted Transportation, Case Management, Chores, Homemaker, Information and Assistance, Legal Assistance, Outreach, Personal Care, Counseling, Crime Prevention Services, Home Repairs, et al	\$4,181,222	\$1,752,157	\$8,854,392	\$309,304		
Title III-C: Nutrition Services	Congregate Meals, Home Delivered Meals, Nutrition Counseling, Nutrition Education	6,838,770	5,384,976	9,974,468	1,687,360

^{*}Note: There is no state match for this program.

^{**}Note: The services in this program are designed to help family caregivers who take care of elderly or family members with disabilities

Source: Prepared by legislative auditor's using expenditures information from GOEA.

Because federal funds can only be used for OAA services, COAs may use local funds and private donations to pay for other services. Local public funding consists of dedicated tax revenue, such as millages for property taxes, sales taxes, or hotel/motel taxes. Local private funding consists of in-kind contributions, donations, investment income, fundraising and other special events. Exhibit 13 summarizes the distribution of all funding sources for COAs throughout the state as reported in their fiscal year 2013 financial statements. Appendix D shows the amount and source of funds for each COA in fiscal year 2013.

Sources of Income for COAs in Fiscal Year 2013

Source: Prepared by legislative auditor's staff using 2013 fiscal and calendar year COA financial statements.

*Note: This category was used by some COAs to report funding from all government sources.

Note: The percentages present add up to 101% due to rounding.

The categories in Exhibit 13 include the following sources of income:

- **OAA** Income reported from GOEA or AAA. This category also includes funds specified as Parish COA or Supplemental Senior Center funds from the state general fund.
- **Local Public** Income reported as local tax proceeds (sales, property, hotel/motel), parish or municipal governments.
- **Local Private** Income reported from client contributions, private donations, fundraisers, charitable gaming, and community organization matches such as regional utility companies or United Way.
- **State/Other Federal** Income reported from other state agencies such as DHH for Medicaid programs, DOTD, CDBG/HUD funds, and FEMA.
- **General Government (Gov't)** Income reported by COAs as intergovernmental without specifying source.

The most commonly used services in fiscal year 2013 included home delivered meals, congregate meals provided in a group setting, and transportation. Exhibit 14 summarizes the services with the highest expenditures in Louisiana in fiscal year 2013, the number served, and the total amount of expenditures for those services. Appendix E provides the same information for all services.

*Note: N/A is reported as not available. The number of unique clients in Rapides service data is less than the total reported in the assessment data. The service report total does not include all individuals served through the Rapides Senior Center which is reported as a separate service provider under CENLA AAA. According to GOEA staff, Rapides Senior Center is approved provider for Congregate Meals, whereas the Rapides COA is approved provider for all other services excluding Congregate Meals.

Source: Prepared by legislative auditor's staff using SAMS assessment and service data provided by GOEA.

Note: For COAs that are a part of a multi-parish AAA, average costs per unit are estimated based on total expenditures and service units reported for the AAA. GOEA does not track expenditures by parish COA.

Note: According to GOEA staff, Rapides Senior Center is approved provider for Congregate Meals, whereas the

Rapides COA is approved provider for all other services excluding Congregate Meals.

^{*}Note: The percent of high nutrition risk clients that did not receive a relevant service is understated. A client may receive more than one service and could be included up to four times in the total number served to number assessed ratio. As a result, the percent of high nutrition risk clients who received a relevant service may exceed 100% which creates a negative percentage for the statistic presented. These negative percentages indicate the parish provided more than one nutrition service to a portion of the clients it assessed as high nutrition risk.

Note: According to GOEA staff, Rapides Senior Center is approved provider for Congregate Meals, whereas the Rapides COA is approved provider for all other services excluding Congregate Meals.
